

Challenge: Jukebox Requirements

Functional Requirements:

1. The juke box should let a user select an album from the available music library
2. choose individual songs from that album to be played
3. Available to input songs from more than one astronaut
4. In case two astronauts add songs >> the first can add not more than three songs , the second can add after him
5. Or Every astronaut can add only three songs in a row to the play queue, and another astronaut wants to play a song, they'll jump ahead in line

NonFunctional Requirements:

1. Sound of the songs must be clear
2. Play speed
3. Usability : easy to use
